

Streamline Prior Authorizations and Manage Adherence to Self-Administered Specialty Drugs

UR-Rx is an e-prescribing tool for pharmacy-benefit specialty drugs, such as injectable biologics. Specialty pharmacies and distributors share actual fill information with UR-Rx, providing you and your care coordination team with full visibility into the status of each prescription.

Information collected can be used to track adherence to medication and to evidence quality, uncovering opportunities for value-based care delivery.

Focus on Patients, Not Paper

If you choose, UR-Rx can assist your practice with the PA process, reducing the burden on your staff and freeing them to focus on medication compliance and patient care.

Keep Your Existing Pharmacies

UR-Rx routes prescriptions to your practice's preferred specialty pharmacy and/or to the pharmacy indicated by the patient's insurance plan. You can keep your established specialty pharmacy relationships.

Track eRx from Send to Fill

A centralized, secure web portal shows the real-time status of all prescriptions sent through UR-Rx. Your staff can see when prescriptions are filled and can take action when they are not.

Free For Members

UR-Rx is included as a benefit of United Rheumatology membership, in support of our mission to improve the independent practice of rheumatology.
